

Customer Recommendation

Downer

Downer uses **Trisol BC** as it supports their Zero Harm approach with all employees, its stakeholders, and the wider industry community.

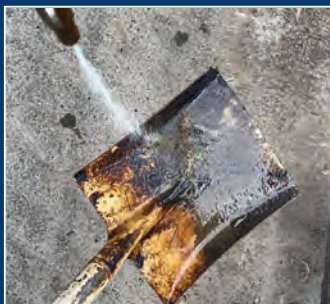

“ Through partnership with Tri Tech, Downers Transport & Infrastructure (T&I) team have introduced a product that gives their paving team an effective solution to prevent asphalt adhesion to tools and machine parts. The paving industry has had historical reliance on Diesel as a solution to this issue. Other products in recent years have come to market as a replacement, and Downers T&I team have found that they provide mixed results at preventing asphalt build up on equipment. The new slip agent product ‘Trisol BC’ now brings a highly effective product to our team. It will lubricate and prevent asphalt build up, without suffering the associated risks from other products. ”

Trisol BC displays excellent solvency on bituminous materials, allowing for safe and efficient clean-up of equipment and tools. **Trisol BC** does not fume when exposed to hot asphalt and the product is not classified as a Dangerous Good. It therefore provides the necessary lubricant and debonding property to asphalt paving crews, without the consequences arising from these aspects.

TRISOL BC - low tox bitumen cleaner/asphalt Slip Agent

Trisol BC can be used to prevent sticking or build-up of bitumen when applied to equipment such as truck trays or hoppers.
